

Java Program to Find Total and Average of Five Subjects using Command Line Arguments

Objective / Aim

To write a Java program that reads the marks of five subjects through command line arguments and calculates and displays the total marks and average marks.

Algorithm / Logic Description

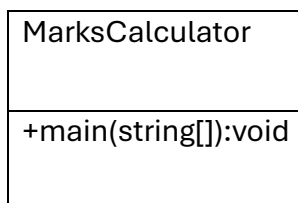

- 1.Start the program.
- 2.Accept five subject marks through command line arguments.
- 3.Convert the command line arguments from String to double using Double.parseDouble().
- 4.Add the five marks to calculate the total.
- 5.Divide the total by 5 to calculate the average.
- 6.Display the total and average.
- 7.Stop the program.

Formula

Total = Mark1 + Mark2 + Mark3 + Mark4 + Mark5

Average = Total / 5

UML Class Diagram

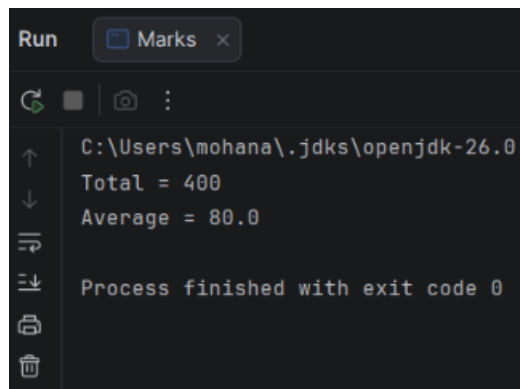

Source Code :

```
class Marks{  
  
    public static void main(String args[]){  
  
        String input[] = {"80", "70", "90", "85", "75"};  
  
        int m1 = Integer.parseInt(input[0]);
```

```
int m2 = Integer.parseInt(input[1]);  
int m3 = Integer.parseInt(input[2]);  
int m4 = Integer.parseInt(input[3]);  
int m5 = Integer.parseInt(input[4]);  
int total = m1 + m2 + m3 + m4 + m5;  
double average = total / 5.0;  
System.out.println("Total = " + total);  
System.out.println("Average = " + average);  
}  
}
```

Output Screen :

```
Run  Marks x  
C:\Users\mohana\.jdk\openjdk-26.0  
Total = 400  
Average = 80.0  
Process finished with exit code 0
```
